#7635	Chapter 5: Development Standards
By: Gem Bingol Tags: public gbingol@pecva.org Date: 1/22/2022	Will there be any sustainability development or performance standards? I see nothing for energy efficiency requirements, solar incorporated into building or parking lot requirements, LID or green infrastructure/stormwater management BMPs that go above and beyond existing requirements. Am I missing something?

#7302	Chapter 5: Development Standards
By: Maura Walsh-Copeland Tags: public Maura@Walsh-CopelandConsulting.com Date: 1/16/2022	"Observation submitted by Save Rural Loudoun: 1. Entire 5.04 and the rest of the ZO References to "districts" are confusing. a. In the current and draft ZO, the word "districts" refers both to zoning districts defined in the GP and to "special and overlay districts" defined in Article 4 of the ZO. b. In the current ZO, dimensional standards only appear to apply to specific "special and overlay districts," not to entire zoning districts. c. Some parts of draft 5.04 appear intended to apply to general by-right subdivision options in entire zoning districts, not just to the individual "special and overlay districts" listed in Article 4 of the ZO. d. This makes it difficult to tell which type of "district" Section 5.04 (and other sections) are referring to. e. To avoid confusion with the broader category of zoning districts, it would be helpful to re-label "special and overlay districts" as "planned developments." All the subsections of Article 4 of the current ZO are labeled "planned developments.""

#7204	5.01 Application of Site Development Terms
By: Charles Houston Tags: public CharlesHouston3@yahoo.com Date:1/15/2022	E.1.a This is confusing: "Where two or more principal uses are located on one parcel, the required parcel size must be the is the larger of two or more uses requirements, and not the sum of all the minimum lot sizes."

#7205	5.01 Application of Site Development Terms
By: Charles Houston Tags: public CharlesHouston3@yahoo.com Date:1/15/2022	E.1.a Scaling should work here - Large parcels should have more flexibility than smaller parcels. Example: 20 or 40-acre base density should have only one principal use. 80-acre parcels can have more than one such use. And so on.

#7206	5.01 Application of Site Development Terms
By: Charles Houston Tags: public CharlesHouston3@yahoo.com Date:1/15/2022	E.1.b. "Dwelling unit" is the wrong term unless the new ZO has different definitions than the existing ZO: Under the old ZO, "dwelling units" mean one room with cooking facilities. #7208	5.01 Application of Site Development Terms
By: Charles Houston Tags: public CharlesHouston3@yahoo.com Date:1/15/2022	E.1.e.1 might be construed as requiring all house frontages to be exactly parallel to the street. This section is the simplest version of stating how to apply the minimum front yard. Encouraging variation of yards, which is clearly good, may be more appropriate in district language where it can be tailored to specific district goals and intent.

#7215	5.01 Application of Site Development Terms
By: Charles Houston Tags: public CharlesHouston3@yahoo.com Date:1/15/2022	H.2.e.3. "Attached garage" is not currently a defined term. Historically an attached garage was a separate structure from a house, with four walls of its own. Now, though, homebuilders incorporate garages into the house itself. #7363	5.01 Application of Site Development Terms
By: John Merrithew Tags: public Date:1/17/2022	F. 1, 2, and 3 seem to be repetitive. They refer to road dedications and public uses and have similar qualifiers. Seems they could be consolidated. By: Ryan Reed Tags: public,staff ryan.reed@loudoun.gov Date:1/4/2022	Indeed, staff are aware and have experienced "loopholes" and challenges with enforcement. Staff is working with the CAO to develop strategies, and the existing steep slopes exemptions represents the most contemporary starting point, with revisions adopted 12/2/2015 in effort to align with state code but address challenges realized in the 2000's.

By: Maura Walsh-Copeland Tags: public Maura@Walsh-CopelandConsulting.com Date:1/3/2022	"5.03.02 STEEP SLOPES. APPLICABILITY & EXEMPTIONS. B.2.a states, "Single Family Dwelling on Existing Legal Lot. Construction of a single residential use on a legal lot existing as of June 16, 1993, is exempt from the requirements of Section 5.03.02.D. Such exemption does not apply to nonresidential uses. Development on such lot is subject to all applicable standards provided in Section 5.03.04." The only thing that has changed from current zoning is the date, which still indicates that the steep slopes protection is ruled null and void if the lot existed

	<p>30 years ago. The primary issue is that many of the ""lots of concern"" are the old wood lots on the Short Hill, Blue Ridge, and Catoctin Ridges, which are the areas that tend to have the most steep slopes.</p> <p>If the new Zoning Ordinance does not protecting those slopes -- probably our most sensitive and most important to protect -- what are we protecting? The logic is similar to the prime ag soils question -- ""protecting"" the asset as long as the residential development potential is still allowed to supersede any agricultural or environmental concern."</p>

<p>By: Ryan Reed Tags: public,staff ryan.reed@loudoun.gov Date:1/4/2022</p>	<p>That is a good point, especially as we see less available, or more easily developable lots. It is important to note that the exemption is only for 5.03.02.D - which prohibits land disturbance except for a limited amount of uses. These lots are still subject to the standards that are now in 5.03.03.</p> <p>Regardless, removing this exemption has been considered, in the past, a "taking" and therefore avoided. Additionally, the Board has clarified their direction with the ZOR to not change the density in western Loudoun. We will further discuss internally.</p>

As such, the LPAT is a policy document and cannot in its entirety be codified into the zoning ordinance. The new ZO can and should be aligned with LPAT policies, so if there are specific ZO regulations that are related to LPAT implementation (open space, RSCR, uses, parking, etc) we are happy to consider any specific recommendations for better LPAT policy alignment. The LPAT as a whole was reviewed by the ZOR team and DPZ prior to final adoption by the BOS.

#6940	5.03.03 NERS Use Table
By: Gem Bingol Tags: public gbingol@pecva.org Date:1/4/2022	Allowing all underlying uses in the suburban area means much greater potential for intense development that would defeat the purposes of protecting the slopes. Generally the streamside slopes are a mix of moderately steep and very steep slopes, making more intense development likely to have a detrimental impact. In these limited areas, it's more reasonable to only allow the base density level of development and not allow special exception and minor special exception uses if the goal really is to protect the sensitive resources per the purpose of this section.

Siting ponds or other structural management practices within natural buffer areas and wetlands degrades their functions and may interrupt surface water and ground water flow when soils are disturbed for installation. In addition, during large rain events, breaches of large wet ponds can cause downstream erosion and degradation due to high volumes and velocity of the discharge (EPA, 2005b).</p>

These requirements do not seem to reflect the flexibility to manage and maintain pollinator meadow habitat. Given that most habitats in Loudoun County would grow into a forest if given the chance, shouldn't flexibility be given to actively manage for pollinator meadow habitat? This may result in native trees being taken down in order to maintain it as a meadow. In order to enforce this, there may need to be further definitions within the zoning ordinance or FSM on what defines a pollinator meadow (to be included in CDPs), so more standards in regards to native vegetation requirements may need to be created, but this would help implement priorities regarding native vegetation in the 2019 GP.

Yellow, amber, red spectrum lights have a demonstrably less disruptive impact on insects critical to pollination and thereby the timing of plant flowering that depends on insects. Bright white/blue spectrum lights are the most disruptive.</p> <p>This is important across the county, but most important in the rural area, which should have as little nighttime lighting as possible to have the least ecosystem impact.</p> <p>Lighted ballfields in the rural area would seem to have the greatest potential for negative impacts.</p>

Recommend that Staff consider the use of defined Zones that each District in the County be assigned. Lighting Zones are recommended by the Dark Sky Association. Implementing lighting zones will allow different amounts of light in areas with different nighttime characteristics. Zones can be defined based on ambient light levels, population density, and other community considerations. For example, the downtown Sterling area would require different standards for outdoor lighting than would a residential zone in Purcellville/Hillsboro areas. The Model lighting Ordinance ("MLO") developed by the International Dark-Sky Association ("IDA") and the Illuminating Engineering Society ("IES") provides examples of lighting zones that could be adopted/modified by Loudoun and delineated in the revised ZO. Each standard for specific use defined in Chapter 3 could then reference the applicable zone as defined in section 5.08.05. I found the Hamlet regulations to be overly restrictive, and most seemed to require modifications of regulations. Rather than fix these problems, the County chose in 2003 to promote clusters as the favored development pattern. Rather than abandoning Hamlets, how might it be revised to fit AR zones?
